

# Printing PDF Image files from your Web browser

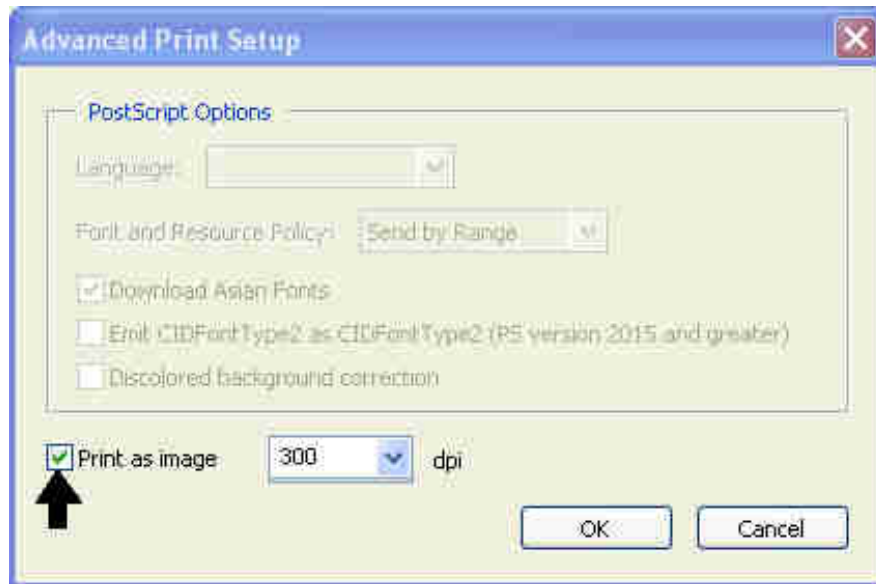

This is for those having difficulty printing PDF image files from their Web browser when using Adobe Acrobat 7 Reader as the default PDF viewer. If using a different version of PDF reader results may vary.

Click the printer icon as shown by the black arrow with your mouse.

Next click the “Advanced” button as shown.

Lastly check the “Print as image” checkbox and click the “OK” button.

You now should be able to print PDF’s made of scanned images. This will be a bit slower than without the setting on text only PDF’s but it is necessary for image PDF’s.

You will not have to set this every time as it saves the setting after you do it the first time.
